SKILLS

Selenium WebDriver
Java
Azure DevOps
TestNG
Cucumber (BDD)
Page Object Model (POM)
CI/CD Pipelines
Git / GitHub
Jenkins
Agile / Scrum Methodology
Functional Testing
Regression Testing
Smoke Testing
Sanity Testing
End to End Testing
Parallel Testing
Cross Browser Testing
Test planning
SDLC
STLC
Test Case
Test Scenarios
VS Code
Eclipse
Maven

I am involved in understanding and analyzing requirements, followed by designing detailed test scenarios and test cases. I develop and maintain automation scripts, execute test cases, and validate results to ensure application quality. I handle defect reporting, tracking, and ensure timely closure while performing regression testing to maintain application stability. Additionally, I prepare and share test status reports with stakeholders, manage test closure activities, and maintain proper documentation. I also work on preparing MTD (Metrics Tracking Dashboard) reports, creating and maintaining test cases and automation scope documents, and performing ROI (Return on Investment) analysis for automation initiatives along with preparing Test Summary Reports (TSR).

WORK EXPERIENCE

Specialist - Quality Engineering
Sep 2021 – Present

LTM (Clients: Amazon, EY, Microsoft)

- Validating reports, dashboards, and data models developed in Microsoft Power BI Desktop to ensure accuracy, performance, and usability.
- Focused on data consistency between source systems and reports, checking for refresh issues, and validating scheduled refresh functionality when published to the Power BI Service
- Designed and implemented end-to-end Automation framework from scratch, improving execution efficiency by 50%+
- Automated cross-browser testing (Chromium, Firefox, WebKit) ensuring consistent application behavior
- Integrated automation suite with CI/CD pipelines (Azure DevOps) enabling continuous testing in build cycles
- Reduced manual testing effort by 50% through scalable reusable components

Sr. Software Engineer
Aug 2018 – Aug 2021

Hexaware Technologies (Client: Citi Bank)

- Developed Hybrid Automation framework using Selenium,Java, Cucumber, TestNG and Maven improving test coverage by 45%+
- Implemented Page Object Model (POM) architecture for maintainable and scalable test scripts
- Performed parallel execution to reduce execution time by 50%
- Managed defects lifecycle using JIRA & Azure Boards, improving resolution turnaround by 50%

Software Tester
Sep 2016 – June 2018

Experis IT Pvt Ltd (Client: IBM)

- Developed automation scripts using Selenium WebDriver Java ,TestNG,Maven POM, improving regression efficiency
- I have worked as a Techno-Functional professional, contributing to both functional and automation testing for ERL and EPI applications, Involved understanding business requirements, performing functional validation, and designing test cases to ensure application quality. In parallel, I developed and maintained automation scripts to improve testing efficiency and coverage.
- Actively participated in client demos and reporting, explaining automation coverage and results

EDUCATION

M.C.A (Master of Computer Applications)
Acharya Nagarjuna University

LANGUAGES

English
Telugu
Hindi

NOTABLE ACHIEVEMENTS

- Generated reports, dashboards, and data models using Microsoft Power BI Desktop, leveraging visuals such as charts, tables, and slicers. I ensure that all visuals display accurate and expected data, and validate their responsiveness to user interactions like filtering, drill-downs, and cross-filtering. I also focus on delivering clear, interactive, and insightful dashboards that support effective decision-making.
- Reduced regression testing cycle by 40–50% using automation frameworks
- Increased test coverage by 35–50% across multiple projects
- Improved defect detection rate, reducing production issues by 25–35%
- Successfully implemented CI/CD-based automation pipelines

Experience Summary

- Having 9.6 years of experience as an Automation Test Engineer in the IT industry, specializing in Selenium with Java
- Experience in developing and maintaining Hybrid Frameworks and Page Object Model (POM)
- Hands-on experience with BDD Framework using Cucumber
- Experience working with GitHub and Bitbucket
- Experience with Microsoft Power BI Desktop (PBID) for reports and dashboards
- Knowledge of Jenkins for CI/CD processes
- Experience in writing test cases and defect tracking using ADO
- Experience working with Apache Maven
- Good knowledge of SQL
- Experience working in Agile methodology
- Strong experience in writing XPath for web-based applications
- Experience using TestNG for automation testing and reporting
- Expertise in SDLC and STLC processes
- Strong understanding of business requirements and experience in preparing and executing test cases for system enhancements and initiatives
- Excellent team player with the ability to meet tight deadlines and work under pressure
- Domain experience in Banking, Insurance, E-commerce and BI

ACCOMPLISHMENTS

Awards

- **Iwin award** - LTM
- **ACE award** - Hexaware Technologies
- **Star award** - Hexaware Technologies
- **Best Performer of the Month** - Experis IT
